**LOWER PLATTE SOUTH NATURAL RESOURCES DISTRICT
RULES AND REGULATIONS FOR
THE NEBRASKA GROUND WATER MANAGEMENT AND PROTECTION ACT**

REVISED EFFECTIVE DATE: October 1, 2011

Authority – The following rules and regulations are adopted pursuant to the Nebraska Groundwater Management and Protection Act (the “Act”) Neb. Rev. Stat. §§ 46-701 to 46-754.

Purpose – The purpose of the rules and regulations is to implement the Lower Platte South Natural Resources District’s Ground Water Management Plan, to develop procedures for the implementation of management practices, to conserve and protect ground water supplies, to prevent the contamination or inefficient or improper use of ground water, and to prevent and resolve conflicts between users of ground water and appropriators of surface water which are hydrologically connected. The District acknowledges the Nebraska preference statute, *Neb. Rev. Stat.* 46-613, which grants preference in the use of ground water, first for domestic purposes, second for agricultural purposes, and last for manufacturing or industrial purposes.

Section A Ground Water Management Area

Rule 1 Management Options and Means Authorized

- (1) The District hereby establishes a Ground Water Management Area which includes the entire geographic area within the boundaries of the District. The District may by order and following a hearing held in accordance with *Neb. Rev. Stat.* §46-712, manage the use of water in the management area for water quantity or water quality purposes or both by any of the following means, as provided in *Neb. Rev. Stat.* §46-739.
 - (a) allocate the amount of ground water that may be withdrawn by ground water users;
 - (b) adopt a system of rotation for use of ground water;
 - (c) adopt well-spacing requirements more restrictive than those found in *Neb. Rev. Stat.* §§ 46- 609 and 46-651;
 - (d) require the installation of devices for measuring ground water withdrawals from wells;
 - (e) adopt a system which requires a reduction of irrigated acres pursuant to subsection (2) of § 46-740;
 - (f) limit or prevent the expansion of irrigated acres or otherwise limit or prevent increases in the consumptive use of ground water withdrawals from water wells used for irrigation or other beneficial purposes;
 - (g) it may require the use of best management practices;
 - (h) it may require the analysis of water or deep soils for fertilizer and chemical content;
 - (i) it may impose mandatory educational requirements designed to protect water quality or stabilize or reduce the incidence of ground water depletion, conflicts between ground water users and surface water appropriators,

- disputes over interstate compacts or decrees, or difficulties fulfilling the provisions of other formal state contracts or agreements;
- (j) it may require water quality monitoring and reporting of results to the district for all water wells within all or part of the management area;
 - (k) it may require District approval of (i) transfers of ground water off the land where the water is withdrawn or (ii) transfers of rights to use ground water that result from district allocations imposed pursuant to subdivision 1(a) of this section or from other restrictions on use that are imposed by the district in accordance with this section. Such approval may be required whether the transfer is within the management area, from inside to outside the management area, or from outside to inside the management area, except that transfers for which permits have been obtained from the Department of Natural Resources prior to July 16, 2004, or pursuant to the Municipal and Rural Domestic Ground Water Transfers Permit Act shall not be subject to district approval pursuant to this subdivision. The district may adopt rules and regulations pursuant to this subdivision that shall require that the district deny or condition the approval of any such transfer when and to the extent such action is necessary to (A) ensure the consistency of the transfer with the purpose or purposes for which the management area was designated, (B) prevent adverse effects on other ground water users or on surface water appropriators, (C) prevent adverse effects on the state's ability to comply with an interstate compact or decree or to fulfill the provisions of any other formal state contract or agreement, and (D) otherwise protect the public interest and prevent detriment to the public welfare;
 - (l) it may require, when conditions so permit, that new or replacement water wells to be used for domestic or other purposes shall be constructed to such a depth that they are less likely to be affected by seasonal water level declines cause by other water wells in the same area;
 - (m) it may close all or a portion of the management area to the issuance of additional permits or may condition the issuance of additional permits on compliance with other rules and regulations adopted and promulgated by the district to achieve the purpose or purposes for which the management area was designated;
 - (n) it may adopt and promulgate such other reasonable rules and regulations as are necessary to carry out the purpose for which a management area was designated.
- (2) In adopting, amending, or repealing any control authorized by subsection (1) of section 46-739, 46-740 or 46-741, the District's considerations shall include, but not be limited to, whether it reasonably appears that such action will mitigate or eliminate the condition which led to designation of the management area or will improve the administration of the area.
 - (3) Upon request by the District or when any of the controls being proposed are for the purpose of integrated management of hydrologically connected ground water and surface water, the Director of Natural Resources shall review and comment on the adoption, amendment, or repeal of any authorized control in a management area. The director may hold a public hearing to consider testimony regarding the

control prior to commenting on the adoption, amendment, or repeal of the control. The director shall consult with the district and fix a time, place, and date for such hearing. In reviewing and commenting on an authorized control in a management area, the director's considerations shall include, but not be limited to, those enumerated in subsection (2) of this section.

- (4) If because of varying ground water uses, varying surface water uses, different irrigation distribution systems, or varying climatic, hydrologic, geologic, or soil conditions existing within a management area, the uniform application throughout such area of one or more controls would fail to carry out the intent of the Nebraska Ground Water Management and Protection Act in a reasonably effective and equitable manner, the controls adopted by the District pursuant to section 46-739 may contain different provisions for different categories of ground water use or portions of the management area which differ from each other because of varying climatic, hydrologic, geologic, or soil conditions. Any differences in such provisions shall recognize and be directed toward such varying ground water uses or varying conditions. Except as otherwise provided in this section, if the District adopts different controls for different categories of ground water use, those controls shall be consistent with section 46-613 and shall, for each such category, be uniform for all portions of the area which have substantially similar climate, hydrologic, geologic, and soil conditions.
- (5) The District may establish different water allocations for different irrigation distribution systems.
- (6) The District may establish different provisions for different hydrologic relationships between ground water and surface water:
 - (a) for management areas for which a purpose is the integrated management of hydrologically connected ground water and surface water, the District may establish different provisions for water wells either permitted or constructed before the designation of a management area for integrated management of hydrologically connected ground water and surface water and for water wells either permitted or constructed on or after the designation date or any other later date or dates established by the District. Permits for construction of new wells not completed by the date of the determination of fully appropriated shall be subject to any conditions imposed by the District;
 - (b) for a management area in a basin or part of a basin that is or was the subject of litigation over an interstate water compact or decree in which the State of Nebraska is a named defendant, the District may establish different provisions for restriction of water wells constructed after January 1, 2001, if such litigation was commenced before or on May 22, 2001. If such litigation is commenced after May 22, 2001, the district may establish different provisions for restriction of water wells constructed after the date on which such litigation is commenced in federal court. An appeal from a decision of the district under this subdivision shall be in accordance with the hearing procedures established in the Nebraska Ground Water Management and Protection Act.

- (7) Except as otherwise authorized by law, the District shall make a replacement water well as defined in section 46-602, or as further defined in district rules and regulations, subject to the same provisions as the water well it replaces.
- (8) If the District has included controls delineated in subdivision (1)(m) of section 46-739 in its management plan, but has not implemented such controls within two years after the initial public hearing on the controls, the district shall hold a public hearing, as provided in section 46-712, regarding the controls before implementing them.
- (9) In addition to the controls listed in subsection (1) of section 46-739, the District may also adopt and implement one or more of the following measures if it determines that any such measures would help the district and water users achieve the goals and objectives of the management area. It may sponsor non-mandatory educational programs and it may establish and implement financial or other incentive programs. As a condition for participation in an incentive program, the district may require water users or landowners to enter into and perform such agreements or covenants concerning the use of land or water as are necessary to produce the benefits for which the incentive program is established.

Rule 2 Designated Areas of Management

- (1) The District hereby establishes the following as designated areas of management:
 - (a) Crete-Princeton-Adams Ground Water Reservoir;
 - (b) Dwight-Valparaiso Ground Water Reservoir;
 - (c) Lower Salt Creek Ground Water Reservoir;
 - (d) Missouri River Ground Water Reservoir;
 - (e) Platte River Ground Water Reservoir;
 - (f) Remaining Area; and
 - (g) Community Water System Protection Areas.

Rule 3 Remaining Area

- (1) Due to the hydrogeology of the remaining area, the District hereby recognizes the need to manage ground water declines, conflicts between users and salt water intrusion and may require well permits on all new and replacement wells in the remaining area designed and constructed to pump greater than 20 gallons per minute, except for domestic wells that pump 50 gallons per minute or less.

Section B Water Well Permits

Rule 1 Water Well Permits

- (1) Any person who intends to construct any new or replacement water well on land which he or she owns or controls that falls within the following categories shall, before commencing construction, apply to the District for a permit on forms provided by the District, and receive approval from the District:
 - (a) any well designed and constructed or modified to pump more than 50 gallons per minute;
 - (b) any well in the Remaining Area (Rule 2 (f) above) designed and constructed or modified to pump more than 20 gallons per minute except

for domestic wells and wells used to water range livestock that pump 50 gallons per minute or less;

- (c) any well in (a) and (b) above that is designed and constructed to pump salt water for a beneficial use;
- (d) any wells commingled, combined, clustered, or joined with any other water well or wells and such wells shall be considered one water well and the combined capacity shall be used as the rated capacity;
- (e) except that no permit shall be required for test holes or dewatering wells with an intended use of 90 days or less;
- (f) permit application forms are available at the office of the District, 3125 Portia Street, at Lincoln, Lancaster County, Nebraska, or shall be available at such office or at such other office or offices as from time to time the Board of Directors shall designate;
- (g) the application shall contain (a) the name and post office address of the applicant or applicants, (b) the nature of the proposed use, (c) the intended location of the proposed water well or other means of obtaining ground water, (d) the intended size, type and description of the proposed water well and the estimated depth, if known, (e) the estimated capacity in gallons per minute, (f) the estimated annual water usage in acre feet per year (g) the acreage and location by legal description of the land involved if the water is to be used for irrigation purposes, (h) a description of the proposed use if other than for irrigation purposes, and (i) the registration number of the water well being replaced if applicable;
- (g) the District shall review such application and issue or deny the permit within thirty days after the application is filed;
- (h) if the District finds that the application is incomplete or defective, it shall return the application for correction. If the correction is not made within sixty days, or an extension is granted, the application shall be cancelled. All permits shall be issued with or without conditions attached or denied not later than thirty days after receipt by the District of a complete and properly prepared application. A permit issued shall specify all regulations and controls adopted by the District relevant to the construction or utilization of the proposed water well. No refund of any application fees shall be made regardless of whether the permit is issued, canceled, or denied. The District shall transmit one copy of each permit issued to the Director of the Department of Natural Resources.

Rule 2 Classes of Well Permits and Required Hydrogeologic and Water Quality Information

- (1) Any well requiring a permit shall be required to provide certain hydrogeologic and water quality information before a water well permit may be approved (Report). The District shall provide guidelines for required Reports which shall be submitted to the District with each permit application.
- (2) Class 1 Permit:
 - (a) applies to any proposed well to be located in a Ground Water Reservoir, that is designed to pump more than 50 gallons per minute and less than

1000 gallons per minute and pump less than 250 acre-feet of water per year;.

(1) The requirements for a class 1 permit shall be as follows and included with the application:

(a) water quality samples shall be collected at the end of a 24-hour pump test. Any well must be pumped at 100% of its designed rate. The samples shall be submitted to a qualified laboratory for an analysis of sodium, chloride and total dissolved solids.

(3) Class 2 Permit:

(a) applies to any proposed well to be located in a Ground Water Reservoir designed and constructed to pump 1000 gallons per minute or more, or pump 250 acre-feet or more water per year

(1) The requirements for a class 2 permit shall be as follows and included with the application:

(a) a copy of well log to determine geologic formation;

(b) an accurate static water level measurement to estimate saturated thickness of the aquifer;

(c) an aquifer test with at least 1 observation well, and all necessary drawdown and pumping data, as required by the District. Aquifer test must be designed and supervised by a licensed professional geologist or engineer;

(d) water quality samples shall be collected at the end of a 24-hour pump test. Any well must be pumped at 100% of its designed rate. The samples shall be submitted to a qualified laboratory for analysis of sodium, chloride and total dissolved solids.

(e) a hydrogeologic analysis report considering the impact of the proposed withdrawal on current ground water users and a minimum twenty (20) year impact on the aquifer for potential future users shall be prepared and submitted by the Applicant. The report must be prepared by a licensed professional geologist or engineer.

(4) Class 3 Permit:

(a) applies to any proposed well located in the Remaining Area (Section A, Rule 2 (f) above) designed and constructed to pump more than 20 gallons per minute and less than 250 gallons per minute and use less than 25 acre-feet of water per year, except a domestic well that pumps 50 gallons per minute or less is not required to obtain a permit;

(1) The requirements for a class 3 permit shall be as follows:

(a) water quality samples shall be collected at the end of a 24-hour pump test. Any well must be pumped at 100% of its designed rate. The samples shall be submitted to a qualified laboratory for analysis of sodium, chloride and total dissolved solids.

- (b) if the well is located within 600 feet of an existing registered well with a higher preference of use, except for a well owned by the applicant, the District shall require:
 - (i) a copy of well log to determine geologic formation;
 - (ii) an accurate static water level measurement to estimate saturated thickness of the aquifer;
 - (iii) an aquifer test with at least 1 observation well, and all necessary drawdown and pumping data as required by the District. The aquifer test must be designed and supervised by a licensed professional geologist or engineer;
- (5) Class 4 Permit:
- (a) applies to any proposed well in the Remaining Area (Rule 2 (f) above) designed to pump 250 gallons per minute or more, or pump 25 acre-feet or more of water per year;
 - (1) The requirements for a class 4 permit shall be as follows:
 - (a) a copy of well log to determine geologic formation;
 - (b) an accurate static water level measurement to estimate saturated thickness of the aquifer;
 - (c) an aquifer test with at least 1 observation well, and all necessary drawdown and pumping data as required by the District and the aquifer test must be designed and supervised by a licensed professional geologist or engineer;
 - (d) water quality samples shall be collected at the end of a 24-hour pump test. Any well must be pumped at 100% of its designed rate. The samples shall be submitted to a qualified laboratory for analysis of sodium, chloride and total dissolved solids.
 - (e) a hydrogeologic analysis report considering the impact of the proposed withdrawal on current ground water users and a minimum twenty (20) year impact on the aquifer for potential future users shall be prepared and submitted by the Applicant. The report must be prepared by a licensed professional geologist or engineer.

(6) Salt water well permit

- (a) A salt water well permit shall be required if an Applicant desires to pump salt water from any proposed well for a beneficial use. The Applicant is required to demonstrate that ground water withdrawals from the proposed well will not cause salt water intrusion. The requirements for a Class 1, 2, 3, or 4 well permit, stated above, shall apply to any salt water well permit.
- (b) The requirements for salt water well permits applies to all permit sized wells described in Class 1, 2, 3, and 4 well permits above, in which either:
 - i) the total dissolved solids of the water quality sample taken at the end of a 24-hour pump test are 2500 parts per million or more and the intended use of the water is for a beneficial use; or
 - ii) the intended use of the well is to pump salt water from an aquifer that is expected to contain salt water under ambient conditions. In this case, the Applicant

may choose to fulfill the requirements below during the 24-hour pump test as required for the appropriate class 1, 2, 3, or 4 permit.

(c) the requirements for a salt water well permit shall be as follows:

(a) Applicant must collect water quality samples from the well at various pumping rates. The samples shall be submitted to a qualified laboratory for analysis of sodium, chloride and total dissolved solids.

One sample each shall be collected at:

(i) a pumping rate of 5 gallons per minute or less. This sample shall be used to determine the ambient water quality of the formation.

(ii) a pumping rate equal to 50% of the designed rate.

(iii) a pumping rate equal to 100% of the designed rate.

(b) Applicant must collect water quality samples at various times during a 24-hour pumping test at 100% of proposed pumping rate. The samples shall be submitted to a qualified laboratory for analysis of sodium, chloride and total dissolved solids. One sample each shall be collected:

(i) within 15 minutes after the start of pumping.

(ii) within 15 minutes of the half-way point between the beginning and end of the pump test. Typically this will be 12 hours after the start of pumping;

(iii) within 15 minutes prior to the end of pumping.

Rule 3 Granting, Denying or Cancelling a Water Well Permit in a Ground Water Reservoir

(1) An application for a permit or late permit for any water well in a Ground Water Reservoir shall be granted unless the District finds any of the following conditions:

(a) the location or operation of the proposed water well or other work would conflict with any regulations or controls adopted by the District or of other applicable laws of the State of Nebraska;

(b) the proposed use would not be a beneficial use of water for domestic, agricultural, manufacturing, or industrial purposes;

(c) the applicant refuses to cooperate with the District in ground water monitoring activities;

(d) an applicant refuses to equip the well with a water well flow meter;

(e) in the case of a late permit only, that the applicant did not act in good faith by failing to obtain a timely permit;

(f) for a Class 1 Permit;

(1) the total dissolved solids from a water quality sample taken at the end of a 24-hour pump test are 2500 parts per million or more, and an applicant does not choose to apply for a salt water well permit.

(2) an applicant shall have the option to apply for a salt water well permit prior to denial of the permit.

(g) for a Class 2 Permit;

(1) the hydrogeologic analysis indicates potential short or long-term detrimental effects to the aquifer and/or if the drawdown cone as

- determined by an aquifer test would intersect a nearby well with a higher preference of use.
 - (2) the total dissolved solids from a water quality sample taken at the end of a 24-hour pump test are 2500 parts per million or more, and the applicant does not choose to apply for a salt water well permit.
 - (3) an applicant shall have the option to apply for a salt water well permit prior to denial of the permit.
- (h) for a Salt Water Well Permit:
 - (1) the water quality samples indicate the potential for salt water intrusion.

Rule 4 Granting, Denying or Cancelling a Water Well Permit in the Remaining Area (Rule 2 (f) above, page 4)

- (1) An application for a permit or late permit for a water well in the Remaining Area shall be granted unless the District finds any of the following conditions:
 - (a) the location or operation of the proposed water well or other work would conflict with any regulations or controls adopted by the District or of other applicable laws of the State of Nebraska;
 - (b) the proposed use would not be a beneficial use of water for domestic, agricultural, manufacturing, or industrial purposes;
 - (c) an applicant refuses to cooperate with the District in ground water monitoring activities;
 - (d) an applicant refuses to equip the well with a water well flow meter;
 - (e) in the case of a late permit only, that the applicant did not act in good faith by failing to obtain a timely permit;
 - (f) for a Class 3 Permit;
 - (1) the total dissolved solids from a water quality sample taken at the end of a 24-hour pump test are 2500 parts per million or more, and the applicant does not choose to apply for a salt water well permit.
 - (2) an applicant shall have the option to apply for a salt water well permit prior to denial of the permit.
 - (3) if the well is located within 600 feet of an existing registered well with a higher preference of use, except for a well owned by the applicant, and the aquifer test indicates the potential short or long-term detrimental effects to the aquifer and/or if the drawdown cone would intersect a nearby well with higher preference of use.
 - (g) for a Class 4 Permit;
 - (1) the total dissolved solids from a water quality sample taken at the end of a 24-hour pump test are 2500 parts per million or more, and the applicant does not choose to apply for a salt water well permit.
 - (2) an applicant shall have the option to apply for a salt water well permit prior to denial of the permit.
 - (3) the hydrogeologic analysis indicates potential short or long-term detrimental effects to the aquifer and/or if the drawdown cone as determined by an aquifer test would intersect a nearby well with higher preference of use.

- (h) for a Salt Water Well Permit:
 - (1) The water quality samples indicate the potential for salt water intrusion.

Rule 5 Water Well Permit Fees and Required Information

- (1) The application shall be accompanied by a fifty dollar (\$50.00) filing fee payable to the District.
- (2) Any person who has failed or in the future fails to obtain a permit required by Rule 1 shall make application for a late permit on forms provided by the District and the application shall be accompanied by a two hundred fifty dollar (\$250.00) fee payable to the District, and shall contain the same information required in Rules 1 and 2.

Rule 6 No Right to Violate

- (1) The issuance by the District of a permit pursuant to section 46-736 or registration of a water well by the Director of the Department of Natural Resources pursuant to section 46-602 shall not vest in any person the right to violate any District rule, regulation, or control in effect on the date of issuance of the permit or the registration of the water well or violate any rule, regulation, or control properly adopted after such date.

Rule 7 Ground Water Monitoring

- (1) All applicants for a water well permit shall, as a condition of the permit, agree to cooperate with the District, at its request, in ground water monitoring activities to include water level measurements and water quality sampling.

Rule 8 Water Well Commence Construction and One-Year Completion

- (1) When any permit is approved pursuant to section 46-736 the applicant shall commence construction as soon as possible after the date of approval and shall complete the construction and equip the water well prior to the date specified in the conditions of approval, which date shall not be more than one year after the date of approval, unless it is clearly demonstrated in the application that one year is an insufficient period of time for such construction. If the applicant fails to complete the project under the terms of the permit, the District may cancel the permit. If the permit is cancelled, the applicant may apply for a new permit in accordance with Rule 2 of this section.

Section C Required Water Well Flow Meters

Rule 1 Water Well Flow Meters

- (1) The District shall require all new and replacement water wells requiring a water well permit to be equipped with a flow meter as a condition of the water well permit.
- (2) After the effective date of these regulations, any water well capable of pumping more than 50 gallons per minute shall be equipped with a water well flow meter prior to use. No water well capable of pumping more

than 50 gallons per minute shall be pumped without first installing a water well flow meter

- (3) The District may, in its sole discretion, require water flow meters on existing wells in the Remaining Area that pump 20 to 50 gallons per minute, on a case by case basis to manage ground water quality and/or quantity .
- (4) Any well owner and/or operator who has a well equipped with a water flow meter shall provide water usage information on the volume of water pumped to the District annually. Any well owner and/or operator is required to maintain each flow meter in working condition on each well pumped.
- (5) The District shall develop a program to cost-share for the inspection and maintenance of water well flow meters.

Section D Phases for Designated Areas of Management

Rule 1 Phases for Designated Areas of Management

- (1) Phase I for quality and quantity has been designated District-wide and the District has established educational programs, ground water monitoring and best management practices. Phase II shall establish cost-share incentives to promote best management practices and require educational certification. Phase III shall establish regulatory requirements to address ground water quality and/or quantity degradation.

Section E Ground Water Monitoring Networks

Rule 1 Monitoring Network in Ground Water Reservoirs

- (1) The District shall establish a ground water monitoring network for ground water quality and quantity.

Rule 2 Monitoring Network in Remaining Area

- (1) The District shall establish a ground water monitoring network for ground water quality and quantity.

Rule 3 Monitoring Network in Community Water System Protection Areas

- (1) The District shall establish a monitoring well network for ground water quality and quantity in Community Water System Protection Areas.

Section F Ground Water Phase Triggers

Rule 1 Phase I Quality and Quantity

- (1) The entire geographic area of the District has been designated as a Phase I Quality and Quantity Ground Water Management Area.

Rule 2 Ground Water Quality Phase Triggers in a Ground Water Reservoir

- (1) The Phase II trigger shall occur when at least 50% of the monitoring wells in the network are at or above 50% of the Maximum Contaminant Level for a contaminant.
- (2) The Phase III trigger shall occur when at least 80% of the monitoring wells in the network are at or above 80% of the Maximum Contaminant Level for a contaminant.

Rule 3 Ground Water Quantity Phase Triggers in a Ground Water Reservoir

- (1) The Phase II trigger shall occur when spring static ground water elevations in 30% of the monitoring network wells have declined from the established upper elevation of the saturated thickness to an elevation that represents greater than or equal to a percent reduction in the saturated thickness and has remained below that elevation for a two consecutive year period.
- (2) Phase III trigger shall occur when spring static water elevations in 50% of the monitoring network wells have declined from the established upper elevation of the saturated thickness to an elevation that represents greater than or equal to a percent reduction in the saturated thickness and has remained below that elevation for a two consecutive year period.
- (3) The percent reduction for each ground water reservoir and phase is:

	Phase II (30% of the wells)	Phase III (50% of the wells)
Lower Salt Creek Ground Water Reservoir	15%	30%
Missouri River Ground Water Reservoir	8%	15%
Platte River Ground Water Reservoir	8%	15%
Crete-Princeton Ground Water Reservoir	8%	15%
Dwight-Valparaiso Ground Water Reservoir	8%	15%

Rule 4 Ground Water Quality Phase Triggers in the Remaining Area

- (1) The Phase II trigger shall occur when at least 50% of the monitoring wells in the network are at or above 50% of the Maximum Contaminant Level for a contaminant.
- (2) The Phase III trigger shall be when at least 80% of the monitoring wells in the network are at or above 80% of the Maximum Contaminant Level for a contaminant.

Rule 5 Ground Water Quantity Phase Triggers in the Remaining Area

- (1) The Phase II trigger shall occur when spring static ground water elevations in 30% of the monitoring network wells have declined from the established upper elevation of the saturated thickness to an elevation that represents greater than or equal to a 8% reduction in the saturated thickness and has remained below that elevation for a two consecutive year period.
- (2) Phase III trigger shall occur when spring static water elevations in 50% of the monitoring network wells have declined from the established upper elevation of the saturated thickness to an elevation that represents greater than or equal to a 15%

reduction in the saturated thickness and has remained below that elevation for a two consecutive year period.

- Rule 6 Ground Water Quality Phase Triggers in a Community Water System Protection Area
- (1) The Phase II trigger shall occur when at least 50% of the monitoring wells in the network are at or above 50% of the Maximum Contaminant Level for a contaminant.
 - (2) The Phase III trigger shall occur when at least 80% of the monitoring wells in the network are at or above 80% of the Maximum Contaminant Level for a contaminant.
- Rule 7 Ground Water Quantity Phase Triggers in a Community Water System Protection Area
- (1) The quantity phase triggers for a Community Water System Protection Area shall occur the same as the triggers of the ground water reservoir or remaining area in which it is located. See rules 3 and 5 of section F.
- Rule 8 Ground Water Monitoring Results Reporting
- (1) Each year the District shall disseminate the results of the ground water monitoring activities to monitoring well cooperators, the Board of Directors, appropriate state and federal agencies and the general public.

Section G Salt Water Intrusion

- Rule 1 Investigation
- (1) When any ground water well in the District shows evidence of salt water intrusion as described herein, the District shall conduct an investigation.
- Rule 2 Investigation Procedures
- (1) Any investigation conducted as a result of salt water intrusion shall include but not be limited to the sampling of the well(s) to determine the concentration of total dissolved solids; collection of historical ground water quality data; pumping rates and ground water usage of wells in the vicinity; ground water level measurements; evaluation of well(s) stratigraphy, depth and pump installation.
- Rule 3 Action Plan
- (1) Upon completion of the salt water intrusion investigation and a determination by the District that salt water intrusion is occurring, the District shall develop an action plan for the effected area. The action plan can provide for incentives to implement best management practices to stabilize and reduce the salt water intrusion. The action plan shall also include a trigger and time line based on the concentration of total dissolved solids in the effected wells to develop and implement rules and regulations.

Rule 4 Rules and Regulations

- (1) When the action plan trigger has occurred, the District shall develop and implement rules and regulations to require well owners to operate their wells in such a manner as to limit or reduce the salt water intrusion.

Section H Ground Water Verification Studies for Management Phase Determination

Rule 1 Ground Water Quality

- (1) When the District's monitoring network in a designated area of management shows that the trigger for either Phase II or Phase III has occurred, the District shall conduct a two year verification study to determine if non-point source contamination has or is occurring.

Section I Ground Water Management Phase Actions

Rule 1 Annual Review for All Phases of Management Actions

- (1) The District shall prepare for the Board of Directors annually, by March 1st, a report reviewing the Ground Water Management actions, even though a Phase has not been triggered.

Rule 2 Phase I Ground Water Management Actions.

- (1) The District shall require all lands irrigated with ground water to be certified. After the effective date of these regulations, any lands irrigated with ground water shall first be certified by the District prior to those lands being irrigated with ground water. The number of acres of lands certified as being irrigated with ground water shall correspond with the number of irrigated acres recorded by county assessors. Lands not certified as irrigated with ground water shall not be irrigated with ground water without being first certified by the District.
- (2) The District shall establish incentive programs to implement best management practices for ground water quality and quantity.
- (3) The District shall establish programs to educate all District constituents on ground water conservation, management and utilization.
- (4) The District shall develop in conjunction with the Department of Natural Resources ("Department"), integrated management plans for any lands found by the Department to be hydrologically connected by surface water and ground water under *Neb. Rev. Stat.* 46-712 if not fully appropriated or under 46-713 & 46-715 if fully appropriated.

Rule 3 Phase II Ground Water Management Actions

- (1) Upon the Board of Directors designation of a Phase II area, the District shall establish an advisory group of stake holders from within the Phase II area to assist the District in developing Phase II rules & regulations, incentives to adopt best management practices and educational certification requirements.

Rule 4 Phase III Ground Water Management Actions

- (1) Advisory Group. Upon the Board of Directors designation of a Phase III area, the District shall establish an advisory group of stake holders from within the Phase III area to assist the District in developing Phase III rules & regulations. The rules and regulations shall require the implementation of best management practices, and shall require landowner reports relating to the contaminant and/or ground water.

Section J Phase II Rules and Regulations

**Section J (1) Ground Water Quality Management Area Phase II
Lower Salt Creek Ground Water Reservoir**

Rule 1 Determination and Designation of Phase II.

Pursuant to Rule 3, Section I, the District has determined that the criteria have been met to designate the Lower Salt Creek Ground Water Reservoir a Phase II Ground Water Quality Management Area for nitrate-nitrogen, and therefore designates a Phase II Ground Water Quality Management Area on the following land, to wit:

Lancaster County, Nebraska:

Township 10 North, Range 7 East,
Sections 4, 5, and 6

Township 11 North, Range 7 East,
Sections 13, 14, 23, 24, 25, 26, 27, 32, 33, 34, and 35;

Township 11 North, Range 8 East,
Sections 1, 2, 3, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19,
20, 21, and 30;

Township 12 North, Range 8 East,
Section 36;

Cass County, Nebraska:

Township 11 North, Range 9 East,
Sections 6 and 7;

Township 12 North, Range 9 East,
Sections 15, 16, 17, 18, 19, 20, 21, 29, 30, 31, and 32 ;

Saunders County, Nebraska:

Township 12 North, Range 9 East,
Sections 1, 2, 3, 4, 5, 7, 8, 9, 10, and 11.

Rule 2 Continue Phase I Rules.

The District shall continue to enforce all rules set forth in Section I, Ground Water Management Area Phase I, with respect to the land designated in Rule 1 above.

Rule 3 Establishment of Cost-Share Programs.
The District will establish cost-share programs to implement Best Management Practices (BMP's) on the land designated in Rule 1 above, which may include, but is not limited to, irrigation scheduling, proper timing and application of nitrogen fertilizers, proper chemigation techniques, crop rotation, residue management, irrigation surge and pivot conversions, water efficiency techniques, ground water nitrate analysis kits and contaminant source inventories. All guidelines for BMP cost-share programs offered in the Lower Salt Creek Ground Water Reservoir Phase II Ground Water Quality Management Area shall be made available by the District.

Rule 4 Required Certification Programs.
The District requires educational certification for persons engaged in the use, application and storage of nitrogen fertilizers. Persons required to complete the nitrogen management certification are those that make the nitrogen management decisions on the land to be fertilized to include but not limited to: operators of agricultural lands who fertilize 20 acres or more; farm managers; commercial applicators; operators of lawn service companies; operators of golf courses; operators of sod farms; and anyone engaged in the application of manure/bio-solids/bio-liquids on five acres or more. The District will notify landowners when person(s) have completed nitrogen management certification. The nitrogen management certification will be offered by attending class(s) or as a take home test. Certification classes will be scheduled each year when necessary from January through March. Certification will be required once every four years. Initially, everyone was required to be certified by March 31, 2004. The District will contact each certified person one year prior to the certification expiration date to verify if they are required to be re-certified. The District will accept certification in nitrogen management from adjoining natural resources districts. The operator shall provide proof of certification to the District.

Rule 5 Annual Review.
The District will conduct an annual review no later than January 31 of each calendar year to assess Phase II actions and effectiveness on the land designated in Rule 1 above, including but not limited to the nitrogen management certification program and the BMP cost-share programs. After review by the appropriate subcommittees and/or advisory groups, the annual review will then be reported to the Board of Directors no later than March 1 of each calendar year.

Section J (2) Ground Water Quality Management Area Phase II Valparaiso Community Water System Protection Area

Rule 1 Determination and Designation of Phase II.
Pursuant to Rule 3, Section I, the District has determined that the criteria have been met to designate the Valparaiso Community Water System Protection Area a Phase II Ground Water Quality Management Area for nitrate-nitrogen and

therefore designates a Phase II Ground Water Quality Management Area on the following land, to wit:

Saunders County, Nebraska:
Township 13 North, Range 5 East,
Sections 14, 15, 21, 22, 23, and the southeast quarter of
section 16.

- Rule 2 Continue Phase I Rules.
The District will continue to enforce all rules set forth in Section I, Ground Water Management Area Phase I with respect to the land designated in Rule 1 above.
- Rule 3 Establishment of Cost-Share Programs.
The District will establish cost-share programs to implement Best Management Practices (BMP's) on the land designated in Rule 1, which may include, but is not limited to, irrigation scheduling, proper timing and application of nitrogen fertilizers, proper chemigation techniques, crop rotation, residue management, irrigation surge and pivot conversions, water efficiency techniques, ground water nitrate analysis kits and contaminant source inventories. All guidelines for BMP cost-share programs offered in the Valparaiso Community Water System Protection Area Phase II Ground Water Quality Management Area shall be made available by the District.
- Rule 4 Required Certification Programs.
The District will require educational certification for persons engaged in the use, application and storage of nitrogen fertilizers. Persons required to complete the nitrogen management certification are those that make the nitrogen management decisions on the land to be fertilized including but not limited to operators of agricultural lands who fertilize 20 acres or more; farm managers, commercial applicators, operators of lawn service companies, operators of golf courses, operators of sod farms, and anyone engaged in the application of manure/bio-solids/bio-liquids on five acres or more. The District will notify landowners when person(s) have completed nitrogen management certification. The nitrogen management certification will be offered by attending class or as a take home test. The certification class will be scheduled each year when necessary from January through March. Certification will be required once every four years. Initially, everyone was required be certified by June 1, 2007. The District will contact each certified person one year prior to the certification expiration date to verify if they are required to be re-certified. The District will accept certification in nitrogen management from adjoining natural resources districts. The operator shall provide proof of certification to the District.
- Rule 5 Annual Review.
The District shall conduct an annual review no later than January 31 of each calendar year to assess Phase II actions and effectiveness on the land designated in Rule 1 above, including but not limited to the nitrogen management

certification program and the BMP cost-share programs. After review by the appropriate subcommittees and/or advisory groups, the annual review will then be reported to the Board of Directors no later than March 1 of each calendar year.

Section J (3) Ground Water Quality Management Area Phase II Otoe County Rural Water District #3/Weeping Water Community Water System Protection Area

Rule 1 Determination and Designation of Phase II.
Pursuant to Rule 3, Section I, the District has determined that the criteria have been met to designate the Otoe County Rural Water District #3/Weeping Water Community Water System Protection Area a Phase II Ground Water Quality Management Area for nitrate-nitrogen and designates a Phase II Ground Water Management Area on the following land, to wit:

Cass County, Nebraska:
Township 11 North, Range 11 East:
Section 1: South ½ of the Southwest ¼
Section 2: South ½ of the Southeast ¼
Section 11: Northeast ¼ and South ½
Section 12: Northwest ¼ and South ½
Section 13: North ½ and North ½ of the South ½
Section 14: North ½ and North ½ of the South ½
Section 15: Northeast ¼; North ½ of the Southeast ¼; and
The portion of the South ½ of the Southeast ¼ within the Village of Manley as of January 1, 2011;

Township 11 North, Range 12 East:
Section 7: South ½ of the Southwest ¼
Section 18: Northwest ¼ and North ½ of the Southwest ¼.

Rule 2 Continue Phase I Rules.
The District will continue to enforce all rules set forth in Section I, Ground Water Management Area Phase I.

Rule 3 Establishment of Cost-Share Programs.
The District will establish cost-share programs to implement Best Management Practices (BMP's) on the land designated in Rule 1, which may include, but is not limited to, irrigation scheduling, proper timing and application of nitrogen fertilizers, proper chemigation techniques, crop rotation, residue management, irrigation surge and pivot conversions, water efficiency techniques, ground water nitrate analysis kits and contaminant source inventories. All guidelines for BMP cost-share programs offered in the Otoe County Rural Water District #3/Weeping Water Community Water System Protection Area Phase II Ground Water Quality Management Area shall be made available by the District.

Rule 4 Required Certification Programs.

The District will require educational certification for persons engaged in the use, application and storage of nitrogen fertilizers. Persons required to complete the nitrogen management certification are those that make the nitrogen management decisions on the land to be fertilized including but not limited to operators of agricultural lands who fertilize 20 acres or more, farm managers, commercial applicators, operators of lawn service companies, operators of golf courses, operators of sod farms, and anyone engaged in the application of manure/bio-solids/bio-liquids on five acres or more. The District will notify landowners when person(s) have completed nitrogen management certification. The nitrogen management certification will be offered by attending class or as a take home test. The certification class will be scheduled each year when necessary from January through March. Certification will be required once every four years. Everyone must be certified by June 1, 2012. The District will contact each certified person one year prior to the certification expiration date to verify if they are required to be re-certified. The District will accept certification in nitrogen management from adjoining natural resources districts. The operator shall provide proof of certification to the District.

Rule 5 Annual Review.

The District shall conduct an annual review no later than January 31 of each calendar year to assess Phase II actions and effectiveness on the land designated in Rule 1 above, including but not limited to the nitrogen management certification program and the BMP cost-share programs. After review by the appropriate subcommittees and/or advisory groups, the annual review will then be reported to the Board of Directors no later than March 1 of each calendar year.

Section K Phase III Rules and Regulations

**Section K(1) Ground Water Quality Management Area Phase III
Elmwood Community Water System Protection Area**

Rule 1

Determination and Designation of Phase III

Pursuant to Rule 4, Section I, the District has determined that the criteria have been met to designate the Elmwood Community Water System Protection Area a Phase III Ground Water Quality Management Area for nitrate-nitrogen and hereby designates a Phase III Ground Water Management Area on the following land, to wit:

Cass County, Nebraska

Township 10 North, Range 10 East:

Section 8: Southeast $\frac{1}{4}$

Section 9: South $\frac{1}{2}$

Section 16: The portion of the Northeast $\frac{1}{4}$ north of the MoPac Trail;

Northwest $\frac{1}{4}$; and the portion of the Southwest $\frac{1}{4}$ north of the MoPac Trail

Section 17: Northeast ¼ and the portion of the Southeast ¼ north of the MoPac Trail.

- Rule 2 Continue Phase I and II Rules.
The District will continue to enforce all rules set forth in Section I, Ground Water Management Area Phases I and II.
- Rule 3 Required Certification Programs.
The District will require educational certification for persons engaged in the use, application and storage of nitrogen fertilizers. Persons required to complete the nitrogen management certification are those that make the nitrogen management decisions on the land to be fertilized including but not limited to operators of agricultural lands who fertilize 20 acres or more, farm managers, commercial applicators, operators of lawn service companies, operators of golf courses, operators of sod farms, and anyone engaged in the application of manure/bio-solids/bio-liquids on five acres or more. The District will notify landowners when person(s) have completed nitrogen management certification. The nitrogen management certification will be offered by attending class or as a take home test. The certification class will be scheduled each year when necessary from January through March. Certification will be required once every four years. Everyone must be certified by March 1, 2012. The District will contact each certified person one year prior to the certification expiration date to verify if they are required to be re-certified. The District will accept certification in nitrogen management from adjoining natural resources districts. The operator shall provide proof of certification to the District.
- Rule 4 Annual Review.
The District shall conduct an annual review no later than January 31 of each calendar year to assess Phase III actions and effectiveness on the land designated in Rule 1 above, including but not limited to the nitrogen management certification program and the BMP cost-share programs. After review by the appropriate subcommittees and/or advisory groups, the annual review will then be reported to the Board of Directors no later than March 1 of each calendar year.
- Rule 5 Except as otherwise provided by Rule 6 below, any landowner, operator, farm manager or applicator who intends to apply nitrogen on any crop is required to conduct soil sampling each year prior to planting such crop. One soil sample shall be collected for each field between 10 and 40 acres, or each 40 acre area within a larger field. Soil samples for each 40 acres shall consist of a minimum of the following:
 One shallow composite sample consisting of 10-15 individual samples randomly collected from a depth of 0-8” and thoroughly mixed; and
 One deep composite sample consisting of 6-8 individual samples randomly collected from a depth of 8-30” and thoroughly mixed. NOTE: The University of Nebraska recommends that deep samples be taken to a depth of 36”.

The District shall offer cost-share assistance for this requirement until June 30, 2014.

- Rule 6 If any landowner, operator, farm manager or applicator applies nitrogen only as a starter, then the soil sampling described by Rule 5 above is not required.
- Rule 7 Nitrogen fertilizer shall only be applied after the results of the soil sampling has been duly considered by the landowner, operator, farm manager or applicator and in no event shall such application exceed the crop nitrogen recommendations as determined according to the most current University of Nebraska formula.
- Rule 8 Landowners, operators, farm managers or applicators required to conduct soil sampling shall report to the District the results of soil sampling and the amount of nitrogen applied to the field(s) sampled during any calendar year by the end of that calendar year.
- Rule 9 Landowners, operators, farm managers or applicators are prohibited from applying nitrogen fertilizer between harvest and March 1 of any crop year.
- Rule 10 The District encourages landowners of abandoned feedlots to identify and implement practices that will increase the uptake of existing nitrogen in the soil below the normal crop root zone and will consider developing programs to provide assistance.
- Rule 11 The District encourages the establishment of grass or other buffer zones surrounding all public or community water wells and will consider developing programs to provide assistance.

Section L Improper Irrigation Run-Off

- Rule 1 Improper Irrigation Run-Off Prevention or Control Options
- (1) All persons must prevent irrigation run-off by implementing any structural or non-structural procedure, measure, or combination thereof which provides for effective prevention, control or abatement of improper ground water irrigation run-off, including but not limited to:
 - (a) limitation of water utilized so that structural measures are not necessary to prevent irrigation run-off water and proper operation and management of the irrigation system, including any reuse or other control measures installed
 - (b) construction of a run-off collection and/or retention system such as a sump or dugout, together with a reuse pump and/or ditch to return the water to the same or other field for beneficial use
 - (c) blocking of rows or field borders to contain irrigation water within the property under the direct supervision or control of such person
 - (d) the execution and performance of an agreement between two or more persons and approved by the District for utilization of any irrigation run-

- off water in accordance with Rule 3 of this Section, and
- (e) any other procedure or measure approved by the District

Rule 2 Irrigation Run-Off Utilization

- (1) Persons whose irrigation run-off water is capable of being captured and utilized by another person in a manner which will prevent waste of such water, deterioration of surface water quality, and accumulation of water upon the land of any other person within his or her consent may have such water excluded from the definition of improper irrigation run-off water by submitting to the District an agreement providing for such capture and utilization signed by all affected parties, on forms provided by the District. When such agreement is approved by the District it will show the District's concurrence that the person's irrigation run-off water is under adequate control. The agreement may be terminated at any time by either party or by the District whenever it is determined that such agreement no longer prevents or controls improper irrigation run-off water. If the District terminates the agreement, written notice shall be provided to all parties. If one of the parties to the agreement causes the termination, written notice shall be provided to all other parties and to the District.

Section M Transfer of Ground Water

Rule 1 Transfer of Ground Water

- (1) Any person who withdraws ground water for any purpose pursuant to a ground water remediation plan as required under the Environmental Protection Act, including the providing of water for domestic purposes, from aquifers located within the State of Nebraska may transfer the use of the ground water off the overlying land if the ground water is put to a reasonable and beneficial use within the State of Nebraska and further complies with the requirements of *Neb. Rev. Stat.* §46-691. Ground water transfers will be allowed for domestic or municipal uses. Ground water transfers for environmental, recreational, agricultural and industrial uses from a ground water reservoir to lands outside of a ground water reservoir are prohibited.

Section N Enforcement Procedures for the Nebraska Ground Water Management & Protection Act

Rule 1 General

- (1) The District shall enforce the provisions of The Nebraska Ground Water Management and Protection Act and all rules and regulations adopted pursuant thereto by the issuance of cease and desist orders in accordance with the procedure hereinafter specified and by bringing appropriate actions in the District court of the county in which any violations occur for enforcement of such orders. Cease and desist orders may be issued for the following reasons:
 - (a) to enforce any of the provisions of the act or of orders or permits issued pursuant to the act

- (b) to initiate suits to enforce the provisions of orders issued pursuant to the act, and
- (c) to restrain the construction of illegal water wells or the withdrawal or use of water from illegal wells

Rule 2 Any person who violates any of the provisions of sections 46-721 to 46-734, and 46- 748 for which a penalty is not otherwise provided, other than the Director of Natural Resources, or the Department of Natural Resources, shall be subject to a civil penalty of not more than five hundred dollars. Each day of continued violation shall constitute a separate offense.

Rule 3 Complaints

- (1) Any person who owns or leases land within the boundaries of the District, any person who resides within the District, any non-resident person who can show that the actions of any person within the District directly affects him or her, or the Board on its own motion may file a written complaint against a person alleging a violation of these rules and regulations or that such person is constructing, operating or possessing an illegal water well.
- (2) Complaints shall be filed at the office of the District, 3125 Portia Street, at Lincoln, Lancaster County, Nebraska, on complaint forms prepared by said District which shall be available at such office or at such other office or offices from time to time the Board of Directors shall designate.

Rule 4 Investigations

- (1) The alleged violation shall be investigated by a person authorized by the Board to conduct such investigations within five (5) days following the day of the filing of the complaint exclusive of Saturday, Sundays, and legal holidays. A copy of the complaint shall be delivered to the alleged violator in person, or at his or her place or residence, or be sent by certified mail prior to the investigation.
- (2) Upon completion of the investigation, the investigator shall file a report of his or her findings in the District office and shall deliver a copy of said report to the alleged violator and to the complainant, if other than the Board, in person, or at their place of residence, or shall transmit the same by certified mail.

Rule 5 Submission of Investigation Report and Subcommittee Consideration Alleging Violation and Alleged Violators Alternatives

- (1) A Subcommittee consisting of District Board members shall assist the District staff in administering these rules and regulations and make a determination as to whether a probable violation of these rules and regulations has occurred. Such determination shall be based upon the investigator's report completed pursuant to Rule 3 and an on-site inspection by the Subcommittee, if warranted. The Subcommittee may also request that both the alleged violator and the complainant appear before them to discuss the complaint. The Subcommittee shall report its findings to the Board, the alleged violator and the complainant with a recommendation of further actions as follows:

- a. if the Subcommittee determines that no violation of these rules and regulations has occurred, it shall recommend and the Board may dismiss the complaint. The complainant shall be given an opportunity to appear before the entire Board before the Board acts on the recommendation
- b. if the Subcommittee determines that a probable violation of these rules and regulations has occurred, the alleged violator shall be informed of its findings by letter delivered in person or sent by registered or certified mail. The letter shall specify the options available to the alleged violator, including:
 1. agree with and accept as true and correct the Subcommittee's findings that the alleged violation has in fact occurred or is occurring, consent to cease and desist from continuing or allowing the reoccurrence of such violation, and submit a plan which shall provide for the discontinuance and/or non-reoccurrence of the violation. If appropriate, such plan shall include the identification and description of all proposed procedures or measure to prevent, control, or abate improper ground water irrigation run-off. The alleged violator shall agree to implement and abide by the terms of such plan. If such plan involves structural measures, the alleged violator shall simultaneously submit a schedule of compliance on forms provided by the District. The schedule of compliance shall provide for the submission of a work order within ten days following approval of the plan in the manner hereinafter provided
 2. reject the findings of the Subcommittee and request that a formal hearing before the Board be scheduled and conducted in accordance with the rules and regulations of the District. The alleged violator shall be granted no less than seven (7) days (excluding Saturdays, Sundays and legal holidays) from the date that said report and notice is provided to him or her to respond and to indicate any actions intended

Rule 6 Action Subsequent to Person's Consent to Cease and Desist

- (1) When an alleged violator has been notified in accordance with Rule 4 of this section and has consented to cease and desist in accordance therewith, a District compliance officer shall review the complaint, the investigator's report, the consent order and any plan for discontinuance and schedule of compliance to determine whether the actions agreed to by the person will, when applied, bring such user into compliance with these rules and regulations, prevent construction, operation or possession of an illegal water well, or prevent improper ground well irrigation run-off. If the compliance officer determines that the proposed actions of the person are adequate and will prevent future non-compliance within a reasonable timer period, he or she shall approve such action or plan and approve the schedule of compliance. If the District compliance officer determines that implementation of the proposed plan and/or schedule of compliance would be inadequate to prevent improper ground water irrigation run-off, he or she shall indicate the additions or changes he or she deems necessary. There after the person shall have five (5) days to consent

to such additions or changes in the event of which the compliance officer shall approve the plan and/or schedule of compliance as amended, or, the person may refuse to agree to such additions or changes and request the scheduling of a formal hearing on the issues, which shall be held no less than ten days from the date of request. The original actions under Rule 4, Part a of this section and the documents filed in accordance therewith by the person shall not be considered at such hearing unless introduced into record by that person. The complainant shall be notified of any such action by the District compliance officer approving the plan and/or schedule of compliance submitted by the person within three (3) days following such approval. If no objections to the action taken are received from the complainant, other than the Board itself, or from any members of the Board if the Board is the complainant within five (5) days after such notification, the proposed plan and/or schedule of compliance shall be considered as having received final approval, if any such complainant or Board member objects to the approval granted by the compliance officer within five (5) days after notification, a formal hearing before the Board shall be scheduled not less than ten (10) days following notification to all affected parties and shall be conducted in the same manner as if the person had requested the hearing in accordance with Rule 5 of this section.

Rule 7 Board Action Subsequent to Person's Request for Hearing

- (1) At a meeting of the Board prior to which an alleged violator, complainant, or Board member has, in accordance with Rule 4 or Rule 5 of this section, requested a formal hearing, the Board shall hold such formal hearing. If, following a hearing, the Board determines that such person is violating or has violated these rules and regulations or is constructing or operating an illegal water well, it shall adopt and transmit to such person, in person or by certified mail, an order directing such user to immediately cease and desist from all activities determined by the Board to be violations and specifying any actions deemed necessary and appropriate by the Board.

Rule 8 Board Action if Person Fails to Respond or Appear

- (1) At a meeting of the Board prior to which an alleged violator has been notified in accordance with Rule 4 or Rule 5 of this section and such alleged violator has failed to respond there under, or has failed to appear at any properly scheduled formal hearing, the Board shall review the complaint and the investigator's report as well as any other pertinent information and issue such order or orders in accordance with these rules and regulations as are deemed appropriate.

Rule 9 Person's Actions Following Issuance of Cease and Desist Order

- (1) Any person against which a cease and desist order has been issued in accordance with these rules and regulations may within seven (7) days following receipt of such order, submit a schedule of compliance. Any such schedule of compliance requested shall be accompanied by a work order on forms provided by the District and the schedule of compliance and the work order shall be approved by the District and the schedule of compliance and the work order shall be approved by

the District compliance officer if such request is in accordance with any and all guidance given by the Board at the time of issuance of the order.

Rule 10 Board Authorization to Initiate Court Action

- (1) The Board shall, at the time it takes any action in accordance with Rules 6 or 7 of this section, designate a representative of the Board to initiate appropriate legal actions in the District Court of the County of which the violation has occurred ten days after the notice to the person affected by issuance of any orders of the District which orders have not been complied with nor a schedule of compliance approved. In addition, if any schedule of compliance or work order approved by the Board or the District compliance officer is not initiated as agreed to or is not being properly and timely carried out, unless due to circumstances beyond the control of the person, the Board shall authorize immediate initiation of appropriate litigation.

Rule 11 Cease and Desist Order

- (1) Any violation of a cease and desist order issued by the Lower Platte South Natural Resources District pursuant to Neb. Rev. Stat. §46-656.08 shall be a Class IV misdemeanor.

Section O Request for Variance

Rule 1 Information Required

- (1) Name, address, phone number, e-mail address
- (2) State the section and rule pertaining to the variance request
- (3) Aerial photo showing location of the variance request
- (4) State why the variance is needed
- (5) Map showing the name and address of all adjoining landowners
- (6) A signed acknowledgement of notice by the adjoining landowners and water well owners
- (7) Any other information the person making the request deems relevant
- (8) Any other information the District deems necessary

Rule 2 Fee For Variance Request

- (1) Deliver to the District a non-refundable fee of \$100 for each variance request

Rule 3 Appearance Before the Directors of the Lower Platte South NRD

- (1) Variance applicant may be required to appear before the Water Resources Subcommittee to explain the variance request
- (2) Variance applicant may be required to appear before the Board of Directors

Rule 4 Consideration of the Variance Request

- (1) All variance requests will be considered on a case by case basis
- (2) All variance requests shall be acted upon by the Board of Directors

Rule 5 Variance Terms & Conditions

- (1) The Board of Directors may place terms and conditions on the variance that the applicant must agree to by signing an affidavit which shall be recorded with the Register of Deeds
- (2) Provide the District with documentation the affidavit was recorded within 30 days of the granting of the variance

Section P Definitions.

Rule 1 Definitions.

For purposes of the Nebraska Ground Water Management and Protection Act, unless the context otherwise requires.

Alleged Violator shall mean any person who is charged with failure to comply with any of these rules and regulations.

Aquifer Test shall mean the design, implementation, and analysis of a test by a licensed professional geologist or engineer according to standard procedures to determine the hydraulic conductivity and storativity of an aquifer.

Best Management Practices (BMPs) shall mean schedules of activities, maintenance procedures, and other management practices utilized to prevent or reduce present and future contamination and/or depletion of ground water which may include soil testing, water testing, irrigation scheduling, proper timing of fertilizer and pesticide application, chemigation techniques, crop rotation, residue management, contaminant source inventories, land treatment, irrigation surge valves, pivot conversions, water return lines, reuse systems, water use efficiency techniques, and other management programs and practices as the Board of Directors may adopt from time to time.

Board or Board of Directors shall mean the Board of Directors of the Lower Platte South Natural Resources District.

Complainant shall mean any person who files a complaint alleging a violation of these rules and regulations.

Community Water System Protection Area shall mean the area of land designated by the Nebraska Department of Environmental Quality that delineates the 20 year time of travel for ground water to be intercepted by a political subdivision that has 15 or more connections to it's water system's well or wells and serves 25 or more year round residents..

Contaminant, Contamination or Contamination of Ground Water shall mean nitrate nitrogen or other material which enters the ground water due to any action of any person and causes degradation of the quality of ground water sufficient to

make such ground water unsuitable for present or reasonably foreseeable beneficial uses.

District shall mean the Lower Platte South Natural Resources District.

District Compliance Officer shall mean an employee of the District authorized to perform the functions assigned by these rules and regulations.

Domestic Well Inside a Ground Water Reservoir shall mean uses of ground water for human needs as it relates to health, fire control and sanitation including water for domestic livestock and plants.

Domestic Well in the Remaining Area shall mean uses of ground water for human needs as it relates to health, fire control and sanitation including water for domestic livestock, plants, and irrigation of less than one acre of land.

Good Cause Shown shall mean a reasonable justification for granting a variance for a consumptive use of water that would otherwise be prohibited by rule or regulation and which the granting agency, district, or organization reasonably and in good faith believes will provide an economic, environmental, social, or public health and safety benefit that is equal to or greater than the benefit resulting from the rule or regulation from which a variance is sought.

Ground Water shall mean that water which occurs in or moves, seeps, filters, or percolates through ground under the surface of the land, and shall include ground water which becomes commingled with waters from surface sources.

Ground Water Reservoir shall mean a designated area of land under which a major aquifer is known to exist and which has been delineated by the District, based on readily identifiable physical boundaries on the land surface, to generally coincide with the boundaries of the aquifer and to be the basis for specific rules and regulations pertaining to ground water as stated in Rule 2, page 4.

Hydrogeologic Analysis shall mean the investigation required to apply for a water well permit in the District. Analysis must include consideration of aquifer boundaries, existing water uses, and other factors appropriate to the hydrogeologic setting of the site. The District shall develop guidelines for preparing hydrogeologic analysis reports.

Illegal Water Well shall mean:

- (a) any water well operated or constructed without or in violation of a permit required by the Nebraska Ground Water Management and Protection Act;
- (b) any water well not in compliance with rules and regulations adopted and promulgated pursuant to the Act

- (c) any water will not properly registered in accordance with sections 46-602 to 46-604, or
- (d) any water well not in compliance with any other applicable laws of the State of Nebraska or with rules and regulations adopted and promulgated pursuant to such laws.

Improper Irrigation Run-off shall mean ground water which is used for irrigation purposes and is allowed to leave or runoff the land where it is being used and which causes or contributes to the accumulation of water upon or beneath the surface of the lands of any other person(s).

Investigator shall mean an employee or agent of the District authorized to perform functions assigned thereto by these rules and regulations.

Irrigation on Lands in the Remaining Area shall mean ground water pumped to apply to plants on one or more acres of land.

Irrigation Run-off Water shall mean ground water used for irrigation purposes which escapes from land owned, leased, or otherwise under the direct supervision and control of a person.

Large Capacity Well shall mean a well designed and constructed to pump more than 50 gallons per minute in a ground water reservoir and more than 20 gallons per minute in the remaining area, except for domestic only wells of between 20 and 50 gallons per minute.

Landowner shall mean any person who owns or has a contract to purchase land.

Non-point Source Pollution shall mean contamination from diffuse sources where no one point of release can be identified and/or sources not identified as point source pollution.

Operator shall mean that person who has the most direct control over the day-to-day operations of the land in question.

Person shall mean a natural person, a partnership, a limited liability company an association, a corporation, a municipality, an irrigation district, an agency or a political subdivision of the State of Nebraska or a department, an agency, or a bureau of the United States.

Pollution shall mean the process of contaminating air, water, or land with impurities to a level that is undesirable.

Point Source Pollution shall mean any discernible, confined, and discrete conveyance, including but not limited to, any pipe, channel, tunnel, conduit, well, discrete fissure, container, rolling stone, vessel, other floating craft, or other conveyance,

over which the Department of Environmental Quality has regulatory authority and from which a substance which can cause or contribute to contamination of ground water is or may be discharged.

Pump Test shall mean the pumping of a well for a specified period of time at a specified pumping rate for the purpose of collecting water quality samples.

Remaining Area shall mean all lands outside of the boundaries of a Ground Water Reservoir

Salt Water shall mean ground water pumped from a well containing total dissolved solids in concentrations more than 2500 parts per million.

Salt Water Intrusion shall mean the physical movement of ground water into a well which either 1) the concentration of total dissolved solids equals or exceeds 2500 parts per million into areas of an aquifer in which the total dissolved solids previously was less than 1000 parts per million due to the pumping of ground water; or 2) the concentration of total dissolved solids equals or exceeds 5000 parts per million into areas of an aquifer in which the total dissolved solids previously was less than 2500 parts per million due to the pumping of ground water; or 3) the concentration of total dissolved solids equals or exceeds 10,000 parts per million into areas of an aquifer in which the total dissolved solids previously was less than 5000 parts per million due to the pumping of ground water.

Salt Water Well shall mean a ground water well drilled and constructed which produces salt water.

Variance shall mean (a) an approval to deviate from a restriction imposed under subsection (1), (2), (8), or (9) of Section 46-714 or (b) the approval to act in a manner contrary to existing rules or regulations from a governing body whose rule or regulation is otherwise applicable.

Water Well shall mean any excavation that is drilled, cored, bored, washed, driven, dug, jetted, or otherwise constructed for the purpose of exploring for ground water, monitoring ground water, utilizing the geothermal properties of the ground, obtaining hydrogeologic information, or extracting water from or injecting water into the underground reservoir. Water well shall not include any excavation made for obtaining or prospecting for oil or natural gas or for inserting media to repressure oil or natural gas bearing formations regulated by the Nebraska Oil and Gas Conservation Commission.
