

REQUEST FOR QUALIFICATIONS

The Lower Platte South Natural Resources District (NRD) invites you to submit qualifications for professional engineering services related to the design of Salt Creek Levee stabilization projects to address several locations of bank erosion along the levee system. The Salt Creek Levee Project is a US Army Corps of Engineers project that is owned, operated and maintained by the NRD. Corps review and approval of any final plans will be required along with updates to the levee system Operation and Maintenance Manual.

The proposed work is located along the levee system of Salt Creek in Lincoln, between North 27th Street and Superior Street, including the portion of levee and channel along Deadmans Run. The design will include the development of construction projects to resolve several issues that are in the NRD's System Wide Improvement Framework (SWIF) for the levee and that are identified in the most recent Corps of Engineers inspection. The final proposed solution may be split into several construction projects that make sense from a construction standpoint and to meet budgeting limitations of the NRD.

The NRD will provide all interested firms a map showing the locations and a brief description of problems along the levee that need to be addressed with the design. Qualifications should include identifying key personnel, showing examples of completed similar projects and any references

Qualifications will be received by the Lower Platte South NRD on or before 12:00 noon, Friday, February 2, 2018 in the NRD Office located at 3125 Portia Street, Lincoln, NE 68521. Please provide four (4) copies.

The NRD will review the Qualifications submitted and then select several qualified consultants to interview. At the completion of the interviews negotiations for services will begin with the selected consultant.

Please publish January 13th, 20th, and 27th, 2018
