

The Lower Platte South Natural Resources District (LPSNRD or District) invites you to submit qualifications for professional services related to technical studies to characterize and evaluate groundwater, soil, land use and other factors in four Wellhead Protection Areas (WHPAs) in eastern Cass County, Nebraska. The general objective of these studies is to evaluate these areas for vulnerability to and occurrence of nonpoint source (NPS) groundwater contamination, particularly from nitrate-nitrogen. These four WHPAs are in two separate general locations, and cover an approximate area of 3,300 acres, or roughly 5.2 square miles.

A statement of interest and qualifications must be received by the Lower Platte South NRD on or before 12:00 noon CDT, November 6, 2026, at the NRD Office located at 3125 Portia Street, Lincoln, NE 68521.

The project selection team will review the qualifications submitted, prioritize the applicants, interview the applicants, and then begin negotiations with the top priority consultant.

For additional information on this project, please contact Steve Herdzina, Water Resources Coordinator, at (402) 476-2729 or sherdzina@lpsnrd.org.
