

# Dead Mans Run - Railroad Bridges Flume Physical Modeling Project Location

A photograph of a large concrete flume structure for water measurement. The flume is a wide, rectangular channel with concrete walls and a flat bottom. Water is flowing through it, creating a small waterfall or drop in the center. The structure is supported by large concrete piers. In the background, there are hills and some buildings under a clear blue sky. The foreground is a grassy slope.

**Big Papillion Creek Flume  
(just south of 83<sup>rd</sup> & I-80, Omaha)**
